Foreword

This year marks the celebration of 50 years of diplomatic relations between the Netherlands and Vietnam, as well as the 10th anniversary of our Strategic Partnership Arrangement on Sustainable Agriculture and Food Security. Our nations have cultivated a strong strategic alliance. United by common traits as delta countries and pivotal trade hubs, we are also navigating through shared challenges.

As delta nations, we both face the risk of floods and extreme weather due to climate change. It is crucial that we swiftly transition to sustainable food systems, balancing food production and consumption while protecting nature, addressing climate issues, and promoting fair economic development. We need solutions that cover multiple aspects. With our two countries aligned in a common approach, we will have ample opportunities.

With pride and delight I see numerous esteemed Dutch organizations joining this trade mission focused on sustainable green growth. With their expertise in agriculture, water, and logistics, they can significantly contribute to Vietnam's transition to sustainable food systems. Likewise, we look forward to learning from our Vietnamese partners' expertise and entrepreneurial spirit. Collaboration strengthens us both.

I am excited to meet various partners from Vietnam and the Netherlands during this timely mission, coinciding with a visit from our Royal Couple. Let us continue building our strong bilateral partnership for a sustainable and prosperous future for both our countries.

Christianne van der Wal

Minister for Nature and Nitrogen Policy

Foreword

With its fast-growing economy, Vietnam is an important trade and investment partner for the Netherlands. Our countries already enjoy close economic ties and I firmly believe this relationship will continue to grow and prosper.

This trade mission is taking place in parallel with the state visit of Their Majesties King Willem-Alexander and Queen Máxima, at the invitation of President Vo Van Thuong. I am proud to be joined on this mission by a large delegation comprising representatives of companies and organisations with wide-ranging expertise in both the water and logistics sectors.

The delegation's size and composition affirms our commitment to contribute to solutions, including nature-based solutions, in the areas of water, climate adaptation, maritime transport and logistics, port development, inland shipping and aviation. These sectors offer countless opportunities for bilateral cooperation and hold great potential for growth in trade and mutual investment. Dutch companies and organisations are looking forward to working with Vietnamese partners, exchanging views and contributing innovative concepts for sustainable development and growth.

Our countries also enjoy excellent relations at government level, building on the framework provided by our Strategic Partnership Agreement on climate change adaptation and water management.

During this visit we will take the robust relationship between the Ministry of Infrastructure and Water Management and our counterparts in Vietnam to the next level. Our time in Hanoi and Ho Chi Minh City will provide opportunities for dialogue with government representatives and the private sector, and for building and consolidating partnerships.

Mark Harbers

Minister of Infrastructure and Water Management

Foreword

It is a great honor and privilege to be the head of the business delegation that accompanies the Royal Couple of the Netherlands, King Willem Alexander and Queen Maxima, on the State visit to Vietnam.

The visit of the Royal Couple is combined with a visit of the Minister of Infrastructure, Mr. Mark Harbers, a business delegation with companies from the agrifood & horticulture, water, and logistics (aviation & ports) sectors and a CEO delegation, representing some of the largest Dutch investors in Vietnam.

The Netherlands and Vietnam have a flourishing trading relationship. This has only improved since the signing of the EU-Vietnam Free Trade Agreement in 2019. The Netherlands is Vietnam's biggest European trading partner, and the Netherlands is also the largest European investor in this growing country.

During our stay, the participating companies will visit Hanoi, Dalat, Hai Phong, and Ho Chi Minh City. These cities have grown more and more in recent years to become important centers of innovation and growth. They are in that view appealing destinations for this economic mission and offer great opportunities for our increasing business relation. Vietnam-Dutch economic relations have a rich past and a promising future. I encourage businesses of both our countries to seek for opportunities to strengthen our relationship even more and I am convinced that this mission will be of great added value to that process.

I wish you all good business!

Ingrid Thijssen

President of the Confederation of Netherlands Industry and Employers, VNO-NCW

Introducing the Netherlands

How do the Dutch make a difference?

Through their interactive approach to finding innovative solutions to the big challenges facing the world today. The Dutch way of thinking and working has been shaped by centuries of living in the low-lying delta of the Netherlands. Through the ages, the Dutch have joined forces to find ingenious ways to tackle challenges like water, urbanisation, energy, food, health and security. By being inventive, pragmatic and open to new challenges, the Dutch have created a flourishing and resilient land.

The Netherlands is a constantly evolving ecosystem of cities, industry, agriculture and nature, all integrated through smart infrastructure. It is a source of knowledge and experience that the Dutch are keen to share with others. Learning from the past to create a better future. Together, seeking sustainable solutions for the most liveable world.

Vietnam and the Netherlands

Transforming to green growth together

Since the mid-eighties, Vietnam has made tremendous strides to become one of Asia's high-growth emerging markets. Although half a world apart, Vietnam and the Netherlands have much in common: They are both open and entrepreneurial trading nations with long coastlines, large agricultural sectors and fertile deltas. At the same time, the two long-lasting and close trading partners share common interests in dealing with water and climate challenges. Vietnam and the Netherlands have worked together for many years on climate adaptation and mitigation in the Mekong Delta, exchanging knowledge, lesson-learned and best practices. The two countries also strategically work on coastal management, water management, marine sand extraction and increased sustainability in Vietnam's food production.

The Netherlands as Vietnam's sustainable partner

Over 50 years, Vietnam and the Netherlands have become close economic and knowledge partners. The two countries cooperate in various areas, including climate adaptation and water, sustainable agriculture and food

production, renewable energy, logistics and high tech. But these are not the only reasons the Netherlands is Vietnam's largest EU investor and export destination. The Dutch have built a reputation for offering quality products and services in areas in which Vietnam is interested. Vietnam is a promising market for the Netherlands, partly because of its strategic location in the world's fastest-growing regional economy. Its working-age population is young and has a strong work ethic. In its partnership with Vietnam, the Netherlands aims to combine sustainable development, trade, and investment. In recent years, the close and successful economic cooperation between Vietnam and the Netherlands has resulted in several high-level visits and trade missions in both directions.

Agrifood and Horticulture

In recent years, Vietnam's agriculture sector has witnessed substantial growth and remains an essential part of Vietnam's economic development. The country has become one of Asia's fastest-growing emerging economies. Agriculture accounts for almost 20% of the GDP in Vietnam, and it's projected to grow due to rising government support, investments

Picture with courtesy of Fresh Studio

overseas, and increasing demands. But - like in the Netherlands - the country also faces several challenges. For instance, salinisation is an increasing problem. Also recognisable between the countries is that both countries are facing a significant labour shortage. They are trying to solve that by mechanising more and looking for other solutions, such as educational and training programs that aim to empower people to change their futures through global development. Only in this way will a sustainable food-producing region in the Mekong Delta be achieved, and the country as a whole will be based on an integrated food system approach with attention to food, nature, and people.

Water

Like the Netherlands, Vietnam is a delta country located by the sea. This makes the country vulnerable to rising sea levels. Vietnam is confronted by many water challenges that risk jeopardising the economy and the environment. Rapid economic development and urbanisation, combined with climate change, are placing tremendous pressure on the country's water resources. Only 12.5% of urban and 71% of industrial wastewater is treated before discharge, and farmers in coastal regions and river basins need more fresh water. Rising demand for water from the urban, industrial, and hydropower sectors is competing with the agriculture sector, which currently uses 80% of water in the country. Increasing water security and water safety is critical to sustainable economic development. Delta and water technology, nature-based solutions, and urban flood management are all areas in which the Netherlands is ready to work with Vietnam on a water-secure future.

Logistics

To fulfil its commitment to net-zero emissions by 2050, Vietnam focuses on developing science and technology application-based multimodal transportation and logistics services. The sector prioritises intensifying “greening” efforts across domains, including green logistics in agriculture, the port and aviation. Vietnam is a central regional trading hub in Asia due to its geographical position as a gateway to South China and ASEAN

markets, being the 2nd largest in ASEAN and ranks 5th worldwide for shipbuilding. The government has declared the maritime sector one of its priorities and is investing in increasing its output capacity as well as the technology level of the industry. By sharing the Netherlands' expertise and technology in the logistics chain with Vietnam, both countries can continue to find intelligent and integrated solutions that result in more sustainable trade, investment, and cooperation in projects and knowledge exchange in efficient transport systems.

Towards a long-term partnership

Increasing global pressures on global resources and climate change underline the need for international collaboration. Vietnam and the Netherlands are both countries that seek practical applications and ideas for global challenges. Together with their commitment to becoming comprehensive partners, positioning companies and knowledge institutions from the Netherlands and matching their knowledge and expertise to Vietnamese demand, they can accelerate the global transition towards a sustainable future.

The Netherlands

www.abundigro.com

Abundigro

Abundigro is a pioneer in crafting specialized, plant-based solutions designed to bolster soil and plant health across the horticultural sector. Our commitment lies in enhancing soil and plant biology to maximize agricultural yields, ensuring crops thrive in an optimally nourished environment. Our product line, including Ukelp, Champion, and Gladiator, embodies our dedication to sustainable growth and soil vitality.

- Ukelp, a cold-pressed Ecklonia maxima kelp seaweed suspension, is a potent plant extract that mitigates stress factors like salinity, drought and malnourishment while stimulating root and plant growth. It provides a rich source of amino acids, polysaccharides, betaines, and sterols, essential for the synthesis of growth hormones in plants.
- Champion is our biological “plant protein shake,” composed of 55% protein hydrolysate, 21% fulvic acid, 21% kelp, 3% flavonoids and citric acid. This blend offers a natural nitrogen source, delivering all 18 amino acids and a full spectrum of microelements to support nutrient uptake and transport throughout the plant, supporting up and down gene regulation, fostering vibrant health and vitality.
- Gladiator enhances plant resilience with a best-in-class monosilicic acid solution, fortified with Boron and Calcium. It strengthens cell walls and the vascular system, improving the plant’s structural integrity and natural defence mechanisms against fungal attacks.

Agriterra

Agriterra was founded in 1997 by the Dutch agricultural cooperative sector: The Netherlands Agricultural and Horticultural Association; The National Cooperative Council for Agriculture and Horticulture; The Dutch Foundation of Cooperating Women's Organisations and The Dutch Agricultural Youth Organisation.

Bert Steenbergen

Liaison Officer and Advisor

+31 6 8999 0492

steenbergen@agriterra.org

As an international specialist in cooperative development, we work by using a three-track approach. We make cooperatives bankable and create real farmer-led businesses. We improve extension services to members and enhance farmer-government dialogues. We use Agripooler, our knowledge broker agency, a unique pool of hundreds of agricultural experts from the Netherlands and other countries.

Tuan Anh Le

Senior Regional

Cooperative Advisor

+84 903 446 986

tuan.anh@agriterra.org

Officially in Vietnam since 2017, our presence extends to 17 provinces, and we have directly supported more than 60 primary cooperatives and indirectly supported 200 cooperatives. Reaching over 80,000 farmers, Agriterra equips and strengthens farmers' organizations so they can boost their services for farmers to increase their productivity and involve youth & women leadership. Through bankable investment plans, we facilitate the development of their agroindustry to generate rural off-farm and off-farm employment. We prepare farmers' organizations and cooperatives to lobby effectively and accountably in favour of farmers to improve the agricultural enabling environment and boost rural development. As of 2023, Agriterra has provided TA to assist 35 cooperatives in accessing banking services and mobilized loans for working capital and investments of more than 2.2 million euros.

DanDutCH

Irrigation for professionals

Xander van der Zande

Owner

+31 6 5027 7510

xander@dandutch.com

DanDutCH ApS is a partnership with combined more than 100 years of Danish and Dutch horticultural experience. Dutch design with a Danish quality product.

The 3 shareholders Jacob Sørensen, Xander van der Zande and Bo Jørgensen of DanDutCH export the products of Staal&Plast A/S and Danvan A/S to the installers and distributors in Asian countries. DanDutCH is the exclusive distribution channel to Asia.

Approach

We would like to assist and develop together with our local installation partner. We want to share our dedicated horticultural experiences in order to improve the yield of the grower.

We can create the most efficient way of irrigating the plants together with the installer by our flexible approach and wide scope of supplies.

- Irrigation equipment
- Bench trays for ebb-flood irrigation
- Nutrient mixers, valves and water treatment
- MGS systems for lettuce and leafy green production
- Sales assistance with the installer to the growers
- Design of greenhouse logistics
- Training and service
- Complementary greenhouse products

Dutch Greenhouse Delta

Global cities are growing, and new metropolises will be added to the map in the coming decades. Increasing population density, climate change and resource scarcity such as water are increasing the demand for smart, integrated solutions for the production and distribution of tasty, healthy, and safe food. The Netherlands is world champion in horticulture, thanks to a unique 'ecosystem' of greenhouse builders, horticulture suppliers, installers, growers, seed companies, research institutes and universities. This 'Dutch Delta' offers opportunities and solutions for world cities such as Ho Chi Minh City, Delhi, Shanghai, Lagos, Jakarta, and Sao Paulo.

Dutch Greenhouse Delta (DGD) is a powerful platform representing the strength of Dutch horticulture by promoting the sector globally to identify and accelerate opportunities. It's a foundation under which various partners join forces and enable common growth. In doing so, we ensure that the sector's innovations, developments, and its individual companies go hand in hand with providing solutions to an ever-increasing need to produce safe, healthy, fresh, and affordable food sustainably and locally. We offer the entire horticultural eco-system of Fork2Farm, consisting of science, enterprise, education, and government.

+31 6 5026 5288

h.sasburg@esgwings.com

ESG Wings is a consulting firm that supports companies to improve their ESG (Environmental, Social and Governance). Our main focus is global supply chains between Asian producers and European markets.

We assist clients that are sourcing from Asian producers or invest in sustainable production in Asia in their need for comprehensive insights into the ESG aspects of their suppliers and supply chain partners to comply with stringent CSRD regulations and enhance transparency.

We support suppliers in their data collection and ESG reporting. We develop practical hands-on tools, and assist suppliers in business improvement. Also we support smallholders, trade companies and manufacturers in improving sustainable production and circular practices, as well as in reviewing and supply chain transformation projects.

Many SMEs, including family-owned businesses, in both Asia and Europe embrace sustainability as a core value, driven by internal values or business growth opportunity. We assist our clients in structuring their organizations to gather and process the necessary ESG data, develop and implement sustainability policies, to prepare them for the current and future global market developments.

Eurofins Agro Testing

Eurofins Scientific is a group of international life sciences companies which provide a unique range of analytical testing services to clients across multiple industries.

Eurofins Agro focusses on soil, crop, water, compost and manure analyses. With the results of the innovative analyses plus tailored guidelines, landowners can close yield gaps, optimise crop quality and use nutrients and water in a prudent way.

Eurofins Agro is established in 1927. Headquarter is located in Wageningen, the Netherlands.

Eurofins Agro embraces the system approach, acknowledging the inter-relationships and inter-dependency of the components of the agri-food system. By analysing the total system and its components, we get a better understanding of the functioning of the agri-food system, and of the factors that may influence and modify these systems. We believe that providing tools (based on analysis) for the system approach contributes to improving crop productivity and quality, and to nutritional security and environmental sustainability. By doing so, we support farmers and growers by optimising their farm management, while food and feed companies are enabled to claim and prove sustainable food and feed production. In addition, governments and research can use the tools for monitoring and guiding purposes (e.g. the SDGs)

FMO: Dutch Entrepreneurial Development Bank

FMO is the Dutch Entrepreneurial Development bank. As a leading impact investor, FMO supports sustainable private sector growth in frontier and growth markets by investing in ambitious projects and entrepreneurs.

FMO believes that a strong private sector leads to economic and social development and has a close to 50-year proven track record of empowering people to employ their skills and improve their quality of life.

FMO focuses on three sectors that have a high development impact: financial institutions, energy, and agribusiness, food & water. With a committed portfolio of EUR 13.2 billion spanning over 85 countries, FMO is one of the larger bilateral private sector development banks globally.

Over the coming decades, the global population will increase to over 9 billion with fewer resources available. FMO has made Agribusiness a priority to help meet this challenge by investing across the value chain - enhancing food security, supporting sustainability and promoting inclusive development. We offer various forms of financing, including long-term loans, equity, mezzanine and working capital finance.

FMO collaborates with SNV on the Dutch Fund for Climate and Development (DFCD). The DFCD enables private sector investment in projects aimed at climate adaptation and mitigation in developing countries. In Vietnam, SNV manages a program for the DFCD Origination Facility that identifies promising climate-focused projects and helps them develop into scalable, bankable solutions.

FoodVentures

Lennart Knot

Business Development

Southeast Asia

+62 812 1400 5712

lennart@foodventures.eu

We firmly believe to have proven solutions to sustainably produce fresh & tasty food. The key to meeting the growing demand for food lies not only in increasing production, but also in minimising our environmental impact.

By embracing nature and innovation, we advocate for a shift towards plant-based diets and the global adoption of modern farming (CEA) practices, near large cities where the consumers need it most.

The CEA industry has transformed in the Netherlands over the past 100 years, which is something to be very proud of, but also something to bring to the rest of the world. It is our mission to lead the way in this transformative journey, rooted from the Netherlands to the world.

Why Us?

- **Pioneer Spirit:** We excel in initiating and operating new greenhouse locations in frontier markets, setting new standards for sustainable modern farming.
- **Global Expertise:** With our roots and FVEC (FV Expertise Centre) in The Netherlands, the undisputed powerhouse of high-tech greenhouses, we are the forefront of tomorrow's farming practices.
- **Empowering Local Farmers:** Our experienced and dedicated team of FoodVentures Expat Growers are deployed on-site, ensuring hands-on expertise and a professional start for the local team.

Fresh Studio

Fresh Studio is an international consulting and research & development company. We are passionate about the world of food and aim to be the most recognized consulting firm in Vietnam and Myanmar for the sourcing and marketing of agriculture products. Committed to transfer product chains into sustainable value chains, we collaborate with our clients and partners to fast-track innovations throughout entire food value-chains.

Since 2006, we have worked passionately to assist our clients to improve all practices from farm to fork. We inspire our clients with refreshing insights into their sourcing, quality assurance and marketing opportunities. With 4 offices and 2 R&D farms (one for crops and one for aquaculture), over 50 staff and more than 250 successfully delivered assignments for private and public sector clients, we play a key role in SE Asia in professionalizing the agriculture sector in the SE Asian region.

Awareness and understanding are prerequisites for doing business in Asia. With knowledge and experience from our work in different countries and cultures, we assist our clients in developing this crucial mindset.

With our teams based in Vietnam, Myanmar and the Netherlands we look forward assisting you to further develop your business in Asia and enhance the development of a sustainable and inclusive agricultural sector in the region.

“Grow better lives from farmers to consumers by making our clients successful in the production and marketing of sustainable food”

GreenAnt

GreenAnt

Founded in 2021, GreenAnt has been focusing on developing tools for climate resilience and has operated in Thailand and Vietnam. In 2023, we merged with SarVision, a Wageningen University's data analysis spin-off, to become a leader in analyzing radar satellite data to provide climate adaptation tools and services.

Mario Edoardo Simmaco

CEO

+39 3387441370

mariosimmaco@greenant.farm

We have developed unique intellectual property for analyzing radar data. Desidera, our flagship product, offers data-backed services to help manage climate risks. This includes predicting harvest failures, assessing flood risks, and estimating damages promptly after such events. Our approach combines artificial intelligence with extensive satellite data, offering a powerful tool for insurers, farmers, and traders to collaboratively tackle climate risks.

Anya Bégué

COO

+1 781 472 0830

anya@greenant.farm

Using our AI-powered SaaS platform, Desidera, users have the flexibility to choose from a variety of subscription packages to obtain services such as EUDR certifications, comprehensive floods and harvest insurance policy bundles, and a variety of data-driven tools for evaluating and managing climate risks.

GreenAnt

Wilhelmina van
Pruisenweg 35
2595 AN The Hague
The Netherlands
www.greenant.farm

By making satellite data analysis accessible to the sectors most exposed to climate risk, we aim to promote sustainability and climate stewardship, across agriculture, real estate, and insurance.

Invest International

Who we are

Invest International invests in Dutch solutions for global challenges. We offer tailor made financing and project development expertise for international projects. Invest International is a private company financed by public means. The company opened its doors in October 2021, in The Hague. Shareholders are the Dutch Ministry of Finance (51%) and Dutch Entrepreneurial Development Bank, FMO (49%). Invest International has 131 employees.

What we do

We provide capital solutions for companies and investment funds whose international activities contribute to realizing the Sustainable Development Goals (SDGs). For governments in emerging economies, we make funds accessible for infrastructure projects. We also provide project development capacity. In combining these, we support projects at every stage of their maturity making use of all funding sources at our disposal.

**Land Water Food
Consult**

Peter Prins

Director

+31 6 1037 8595

peter@landwaterfood.com

Land Water Food Consult

Land Water Food Consult (LWF) is a consultancy firm, established in 2014 by Peter Prins. LWF focuses on farmers and agricultural development, especially when issues related soil and water hamper production. Vietnam is one of the spearheaded countries. Vietnam Farmers' Union and leading Vietnamese companies are strong partners in various projects.

Core activities are private sector development, technical training, capacity building or study tours. The company connects the Dutch agribusiness and water sector with Vietnamese partners. Customers can be the private sector, the public sector and international agencies, such as Asian Development Bank.

LWF supports farmers in improving the cultivation of Mango (Dong Thap), Pomelo (Ben Tre) and Dragon Fruit (Long An, Binh Thuan). Goal is to improve the quality of the fruit and to strengthen the export position of the farmers.

Saline water intrusion is an increasing problem in the Mekong Delta, just as in the coastal zone of the Netherlands. Peter is part-time CEO of SALTA, a Dutch cluster of 40 public and private partners that join forces on the knowledge of salinity issues in the coastal zone of the Netherlands.

LWF is member of the Global Alliance on Climate Smart Agriculture.

Municipality of Westland

Bouke Arends

Mayor

Secretariaatburgemeester@gemeentewestland.nl

Westland boasts the world's largest concentration of glass greenhouses in the world. The greenhouse industry in our municipality generates around €6 billion annually. In Westland and the Greenport West-Holland all the key players in the entire chain of greenhouse horticulture are concentrated in an area of less than 100 square kilometers: from seeds to growing and from packaging to trade, supported by government and knowledge institutes.

Wesley Toelen

Chief of Staff & Head of
External Relations

+31 6 2311 3305

Wtoelen@gemeentewestland.nl

Every day, companies from our region work on new innovations to improve horticulture, such as electricity production by cogeneration, different types of closed greenhouses and sustainable water use. We enthusiastically show these innovations to the rest of the world and are constantly reaching out to other businesses.

Ivo Meijer

Sr. Manager International
& Economic Affairs

+31 6 2012 0570

IMMeijer@gemeentewestland.nl

These innovations try to offer solutions to some of the macro developments the world is facing. By 2050, it is expected that the world population will reach 9 billion people, living in so-called megacities. Feeding the populations of these megacities will become increasingly important.

We strongly believe that food production must be done more locally, which can be achieved through high-tech horticulture.

Netherlands Food Partnership

Netherlands Food Partnership makes food systems more economically, socially and environmentally viable by bringing people together and by connecting and supporting agri-food initiatives with an impact in LMIC.

By playing a convening role, NFP strengthens relationships and networks between partners from the Global South and the Netherlands. We provide linkages and knowledge access to all Agri & Food organisations - from farmers to consumers. And we stimulate knowledge exchange and policy dialogue.

We also promote multi-stakeholder collaboration between the private sector, knowledge institutes, civil society and the public sector. By fostering and supporting the emergence and growth of action oriented partnerships and coalitions, NFP contributes to tackling concrete, LMIC owned food system challenges.

Van Tuijl is a service organisation in animal feed production. We process raw materials and manufacture animal feed commissioned by third parties. We start from your recipe. We aim for top quality across the entire chain of meat production through to consumption. We are fully compliant with the relevant HACCP and GMP+ standards. P.C. van Tuijl is founded in 1962 in The Netherlands. The founder, Mr. P.C. van Tuijl, was a millers son. Since he was young, he learned to grind in the mill of his father. As a young man he worked as a representative in animal feed business. After that, he started a company in compound feed for livestock. When compounding recipes, he worked accurately and liked it to improve the product after getting feedback from his clients.

Meanwhile, the third generation of the family is joining the company. We are running a milling-, extruding-, mixing- and bagging-line and a warehouse to store products in bulk and bagged goods. Meanwhile, we started with a complete new product line in fat coating and encapsulating vitamins and amino acids, in order to make feed additives for dairy cows much more effective.

Topsector Horticulture & Starting Materials

In this economic mission I have the honor to chair the mission track Agri&Food and Horticulture & Starting Materials to jointly address economic opportunities of societal challenges. This requires close cooperation between governments, businesses and knowledge institutes.

Horticulture & Starting Materials and Agri&Food are sectors in the Netherlands that excel globally, supporting public-private cooperation on innovative solutions for societal challenges concerning sustainable value chains, climate adaptation, water quality, and the circular use of raw materials. Main objectives of this cooperation are to stimulate innovation on sustainable goals, valorization of knowledge, human capital development and support of international R&D and innovation for global challenges such as food security and quality, climate change, labor shortage, the sensible use of raw materials and the protection of our environment and biodiversity.

This so called topsector approach involves government, the business communities (over 170.000 mainly SME companies), educational and research institutes and information-providing organizations. Dutch entrepreneurs, researchers and suppliers of technology can be found all over the world. The Netherlands is the largest exporter of vegetable seeds in the world. Almost 40% of the seeds traded globally for horticulture and arable farming come from the Netherlands.

Dutch and Vietnamese companies and knowledge institutes closely cooperate for many years providing technologies and knowledge for sustainable and high quality agrifood production. In this mission we seek opportunities to extend this cooperation.

Vietnam Food Europe

Nga Dang

Co-Founder

+31 6 3958 7399

nga@misslinh.com

Miss Linh is a unique B2B e-platform that makes it possible for businesses in the food sector in Europe to buy directly from the food companies in Vietnam in particular led by women. These communities in Vietnam receive a fair price for their products and the food businesses in Europe receive the best products that Vietnam has to offer. The food companies in Vietnam will be able to sell their products to a large network of potential buyers throughout the whole of Europe, starting with the Netherlands. This way Miss Linh contributes to creating an equal, fair and better world

Thanh Ly

Co-Founder

+31 6 4814 1606

thanh@misslinh.com

The reason why we started Miss Linh is to create an opportunity for food companies in Vietnam to easily sell their products to European companies for a fair price. For the people in Europe, this is the best and most honest way to taste the best products that Vietnam has to offer.

Miss Linh, an honest way to taste the best of Vietnam!

Wageningen University & Research (WUR) stands as the premier institution in the Netherlands dedicated solely to the advancement of agriculture and food sciences. With a network of around 30 research locations, 7,000 esteemed staff members, and a vibrant community of more than 14,000 students, we proudly hold a global reputation as frontrunners in the fields of agriculture, food, and forestry.

What sets us apart is our unwavering commitment to bridging the gap between knowledge creation and real-world application. Unlike conventional universities, we seamlessly integrate research, education, and value creation to deliver tangible solutions for our partners and clients. This unique approach has been pivotal in our international success.

Our influence extends far beyond the Netherlands, with a significant footprint in countries worldwide, including extensive involvement in projects across Vietnam. Through our collaborative efforts, we continue to drive innovation and foster sustainable development, shaping the future of agriculture and food systems on a global scale. In addition to our core focus on fundamental research and academic instruction, WUR is deeply involved in contract research, strategic consulting and capacity building initiatives.

Wesemael Group

The Wesemael Group originated in 1960, has over 300 employees and consists of various pillars, here we represent the division “Plantsupport /Hardware”. We operate in the Horticulture (greenhouses), Tree Nursery, Fruit Growing / Vineyards and Automotive protection sectors, with delivery to end-users, public landscapers, growers, wholesale and retail. Certified ISO, BSCI and FSC.

For the agricultural sectors, Wesemael Group is a leading supplier in the field of plant & tree support with all necessary binding materials. We provide bamboo sticks and canes (upon request treated against fungus), metal wire forms, wire tree baskets, jute, synthetic and biodegradable solutions, in addition we protect fruit trees / vineyards and cars by means of hail nets, that we deliver turnkey. With customers worldwide we deliver 40 countries and still counting.

Characteristic for the group are the connections with and knowledge of the market / sector. Short lines with the end user and being aware of the latest developments coincide with years of experience. On the purchasing side, there are own production locations in Europe and Asia. We supply worldwide and offer short delivery times from our own warehouses. This enables us to act rapidly and spread innovations worldwide on short-term.

The Wesemael Group strives for long-term collaborations in which we envisage joint growth. Thinking in possibilities, with a passion for doing things right and the products we supply.

KLM Royal Dutch Airlines

Carrying 34.1 million passengers and 621,000 tonnes cargo, KLM and KLM Cityhopper form the heart of the KLM Group.

Via a vast network of 92 European cities and 70 intercontinental destinations, KLM offers direct services to key economic centres all over the world.

KLM is part of the SkyTeam Alliance, offering passengers even more possibilities, jointly serving 1,063 destinations in 173 countries.

The KLM Group includes the wholly owned subsidiaries Transavia and Martinair. Transavia is the leading low-cost airline in the Netherlands, operating out of Amsterdam, Eindhoven and Rotterdam.

Following the merger with Air France in 2004, KLM has pursued the concept of 1 Air France-KLM Group, 2 airlines, and 3 core activities (passengers, cargo and engineering & maintenance). Together with Air France, KLM plays a pioneering role in the European air transport industry. KLM pursues profitable growth to achieve its own commercial objectives as well as more general economic and social objectives.

KLM is actively driving sustainable growth at Amsterdam Airport Schiphol and seeks to gain access to any market that will improve the quality of its network. In addition, KLM endeavors to ensure a level playing field for all participants in the sector.

NACO, Netherlands Airport Consultants

NACO, Netherlands Airport Consultants, is a world-leading independent airport consultancy and engineering firm with 75 years of experience in the aviation and air transport industry. Since 1949, NACO has provided integrated full-service planning, design, and development services to over 600 airports in more than 100 countries around the globe.

As the aviation business company of Royal HaskoningDHV, NACO is one of the few consultants in the world that offers products and services in all aspects of airport development, from business consultancy to project implementation, construction supervision, and starting operations (ORAT).

Being at the forefront of the developments in aviation, we are experts in sustainability, passenger experience, smart aviation and digital transformation. With our services, we produce tangible benefits for airports while safeguarding and future-proofing their operations.

In Vietnam, NACO has been involved since the early 2000s with Da Nang terminal design, Van Don international airport project management and ORAT, and most recently in the feasibility study and design review for Long Thanh International Airport.

OTTO Work Force

There are a multitude of different industries which are currently struggling with a shortage of qualified personnel. From agriculture and horticulture to logistics and construction. We have developed into the largest international employment agency in Europe since our foundation back in 2000. We help employers to find professionally trained personnel from the Netherlands and abroad. This allows companies to focus on their core tasks without having to worry about personnel. We take good care of our people.

Anyone who works hard here simply forms part of the team! Our starting principle is that we treat our people in the exact same way as we would like to be treated if we were working in a different country. That means well-organised work, fair and correct pay, good support to settle in the Netherlands and a decent place to live. That's been in OTTO's DNA since day one.

Royal Schiphol Group

Royal Schiphol Group is a world-renowned airport operator. We own, operate, master-plan and carry out capital programs and real estate development activities at our home base Amsterdam Airport Schiphol and at airports throughout our international airport network.

Every year, Amsterdam Airport Schiphol welcomes over 62 million passengers and process 1.7 million tonnes of cargo. In addition, we own and operate Rotterdam The Hague Airport, Lelystad Airport, Maastricht Airport (40%) and Eindhoven Airport (51%) in The Netherlands. Internationally, Schiphol holds a stake or management contract Brisbane Airport and Hobart Airport in Australia, JFK Terminal 4 in New York, St. Maarten Airport and Aruba Airport.

Schiphol is well-known for its sustainability efforts. Last year, three of our airports were among the first ten airports worldwide to be awarded ACI's highest level for airport sustainability (level 5). Other than that we are highly experienced in route development (Schiphol is one the best-connected airports in the world), innovation, operational efficiency, and non-aeronautical revenue development. Moreover, Schiphol was the founder of the Airport City concept.

What we stand for, is being a long-term and loyal partner that wants to build strong partnerships on the back of cooperation and co-creation. We are very much looking forward to establish new partnerships in Asia!

Vanderlande is a market-leading, global partner for future-proof logistic process automation in the airports, parcel and warehousing sectors. Its extensive portfolio of integrated solutions – innovative systems, intelligent software and life-cycle services – results in the realisation of fast, reliable and efficient automation technology.

The company focuses on the optimisation of its customers' business processes and competitive positions. Through close cooperation, it strives for the improvement of their operational activities and the expansion of their logistical achievements.

As a global partner for future-proof airport automation, Vanderlande's market-leading baggage handling systems and related passenger solutions are capable of moving over 4 billion pieces of baggage around the world per year. These are active in more than 600 airports, including 12 of the world's top 20. In addition, over 380 of Vanderlande's passenger security lanes are installed at checkpoints worldwide.

Vanderlande is also a leading supplier of process automation solutions that address the challenges in the parcel market. More than 52 million parcels are sorted by its systems every day, which have been installed for the world's leading parcel handling companies.

Vanderlande's warehousing solutions are the first choice for many of the largest global e-commerce players and retailers in food, fashion and general merchandise across the globe.

dan.jian@apmterminals.com

Vietnam is an important market for APMT. In March 2023 we announced a strategic partnership with Vietnamese HATECO group for a project to develop two new deep-water berths at Lach Huyen port in Haiphong City. The project entails the development of two berths with the total length of 900 metres, capable of accommodating container vessels of up to 18,000 TEUs capacity. The new terminal is expected to become operational by the first quarter of 2025.

In addition to our activities in Haiphong, APMT is active in our joint venture in Cai Mep since 2007. Cai Mep International Terminal (CMIT) is strategically located 50 kilometers southeast of Vietnam's commercial hub, Ho Chi Minh City. CMIT is one of the few terminals in Vietnam capable of accommodating vessels up to ~ 20,000 TEU.

The family-owned Damen Shipyards Group has been in operation for over ninety years and offers maritime solutions worldwide, through design, shipbuilding, ship repair and related services. Damen operates 35 shipyards in thirteen countries. We offer direct employment to more than 12,500 people, with a turnover of over 2.5 billion euros and delivering over 175 ships annually. In addition to fellowship, craftsmanship and entrepreneurship, stewardship is a starting point for Damen. We aim to be the most sustainable shipbuilder and maritime service provider in the world. Digitalization and standardization of platforms are important preconditions in our operational excellence program. Our main activities are the design and serial construction of inventive ships by integrating various components and subsystems into high-quality platforms. These activities are supported by a worldwide sales and service network.

Damen Shipyards Group focuses on niche maritime markets. On workboats for towage, dredging, offshore, fishing, aquaculture, and other markets. On high-speed craft and maritime public transport. On ships for naval purposes and defence & security and on exclusive yachts. In addition, we are also active in (digital and financial) servitisation, the repair and conversion of existing ships and the sale and production of components for the maritime industry.

NxtPort International

Ports are key nodes in global commerce and the energy transition. To remain competitive and sustainable in today's volatile economic and geopolitical climate, and capture opportunities the new energy supply chains will bring tomorrow, port communities need to drastically reimagine the way information is shared in the value chain.

NxtPort International supports private and public sector port users in their digital transformation journey by providing foundational IT infrastructure that allows neutral and secure data exchange in what is a zero-trust environment by nature.

By offering strict data governance through our unique technology, data providers retain ownership and control over what happens with their data. This has proven one of the critical success factors when building trust among supply chain actors.

And as data collection in port supply chains is increasingly automated using I-IoT devices like cameras and sensors, the need for our highly secure data orchestration capabilities, compliant with prevailing cyber security and privacy regulations is rapidly becoming a non-negotiable.

Royal HaskoningDHV

Royal HaskoningDHV is an international, employee-owned consulting engineering company since 1881. Our consultants and engineers provide impactful sustainable solutions for the natural and built environment. We guide clients in their journey to be sustainable and future-ready, enabling them to thrive and communities to flourish.

We are dedicated to solving complex client challenges by providing people-centric and independent advice, building on over 140 years of deep domain knowledge, integrated with data and software.

Through our mission Enhancing Society Together, we take responsibility for having a positive impact on the world and contribute to UN Sustainable Development Goals.

Backed by the expertise of 6,000 colleagues working from offices in more than 20 countries globally, we are helping clients with challenges ranging from climate change and digital transformation to changing customer demands and the energy transition.

Our head office is in the Netherlands, and we have offices across Europe, Asia, Africa, Australia and the Americas.

Bosman Watermanagement

Introducing Bosman Watermanagement, your partner in pump solutions for flood control, irrigation applications, and wastewater treatment solutions since 1929. As a family-owned business, we take pride in crafting pumping equipment, aeration- and filtration systems that are not only built to last but designed for your needs.

We're not just about products but about finding answers to your challenges. When you work with us, you get a team of problem solvers dedicated to making your water management and wastewater management efficient and effective.

With Bosman Watermanagement, you're investing in more than just equipment. You're investing in decades of experience, innovation, and a commitment to helping you overcome hurdles. Let us be the solution that transforms your obstacles into clear, manageable solutions.

Delta Context

Delta Context is an independent engineering consultancy firm operating in the international water arena of deltas, coasts, rivers, water management, ports and waterway transport.

Delta Context is based in the Netherlands and has focus and key staff experience in particularly Africa, South and Southeast Asia. Current emphasis is on water related projects in Bangladesh, Vietnam and India.

Delta Context is working for National Governments, private sector and Development Partners like World Bank, Asian Development Bank, African Development Bank, Dutch Government and United States Agency for International Development. Although the company has been established in 2020, it can rely on more than 30 years of international experience of key staff and a wide network of professional expertise in various fields.

Delta Context is driven by water and providing embedded and integrated solutions to clients, funding agencies and stakeholders within the context of both the physical and socio-economic setting. Climate adaptation in the coastal, riverine and urban environment is Delta Context's core and is done via means of modern tools and innovative and nature-based approaches in a flexible and interactive manner.

Deltares is a world leading Dutch knowledge institute in the field of water and subsurface. We are driven by societal needs, conducting applied research to provide accessible knowledge for decision-making. With collaborative efforts involving governments, companies, and NGOs, Deltares strives to ensure the safety, sustainability, and livability of coastal and river areas—a pursuit spanning over a century.

In Vietnam, we exemplify our commitment by addressing intricate water challenges through tailored solutions developed alongside local stakeholders. Our expertise in data analysis, fieldwork, and capacity building significantly contributes to enhancing water security and environmental sustainability in the country. This engagement underscores our dedication to our mission and relevance in addressing pressing global water issues.

Our impact extends beyond borders, resonating with the urgent need for sustainable water management worldwide. Our holistic approach, blending research and practical solutions, set a benchmark for addressing complex water challenges, demonstrating the institute's value as a crucial player in shaping a more resilient future for vulnerable regions like Vietnam and beyond.

Fibre Security

FibreSecurity is providing very innovative monitoring systems using sensors in microfibre which can measure stress, vibration, deformation, corrosion, weight, pressure, temperature, electrical current, chemical spills, etc. The main focus is its applications in the building, (air)port, construction (bridges/tunnels) and water sector.

FibreSecurity bv is the Dutch arm of the Mon-It group, tech company with a lot of influence in the discipline. We developed innovative and unique patents for the use of fibreoptic based sensors. These systems are important across almost all engineering sectors, measuring stress, deformation and many other physiochemical characteristics.

The inspiration for these applications began through seeking solutions to unusual but vital needs in engineering contexts for continuous live data. In particular, strategic services: roads and bridge infrastructure, harbours, airport runways and aprons, pipelines of all types: water, sewage, gas, oil, as well as communications infrastructure, both in use and new construction.

Our systems contribute to carbon reduction for asset management of networks by remotely flagging issues as well as AI intuitively analysing and predicting failures or significant changes. The reduction in intrusive interventions and consequent minimising traffic delays is a significant advance for all sectors, particularly those dependent upon smooth customer focussed operations: roads, ports and airports.

j.shepherd@lgsonic.com

LG Sonic is a Dutch company that develops cutting-edge technologies to monitor water quality and control algal blooms. With ultrasonic algae control technology, aquatic ecosystems are recovered without chemicals. Investments in research and development have made LG Sonic leaders in algae management. In the last years, the company has grown worldwide with projects in 55 countries.

Recently, the company introduced a Digital Twin to allow utilities to map their catchments, alert themselves to water quality issues and optimise water treatment optimisations at source such that they realise a return of investment. Within the range we offer remote sensing, water quality monitoring, vertical profiling system and Phosphate sensor as well as solar-powered, chemical-free ultrasonic control of harmful algal blooms.

LG Sonic works primarily with drinking water utilities, governments and power plants, to remediate large reservoirs and lakes.

Paques

For more than 40 years, Paques has been one of the world's leading companies in the field of development and construction of cost-effective purification systems for water, wastewater and gases, based on innovative biotechnology. With almost 3,000 reference installations worldwide, Paques has helped companies and municipalities to contribute to one of the major challenges of today: to reduce their water and carbon footprints and reclaim valuable resources. The biogas produced by the wastewater treatment plants can be used as green energy in boilers or gas engines. Besides the headquarters in the Netherlands, Paques has subsidiaries and/or production locations in China, Brazil, Argentina, Colombia, United States of America, India, Malaysia, Singapore and Thailand. In many other countries, Paques is represented by licensed partners. This ensures local presence and the best service for our clients worldwide.

ROwat Water Control

ROwat Water Control is a trade name of Bergschenhoek Water technology B.V. a company with over 50 years experience in providing Water Control and Water Storage Solutions worldwide.

ROwat Water Control supplies Penstocks, (Flap)Valves and Weirs for quantitative Water Control. ROwat products are suitable for Flood Control, Waste Water Treatment Plants, Pumping Stations, Surface Water management and Wetlands Creation.

ROwat combines both HDPE and Low Carbon Stainless Steel in order to reach the sustainable quality required for most aggressive environments like tropical marine applications and the inlet section of Sewage Treatment (plants).

Due to its excellent material compound with no breakdown or deterioration during the product lifetime, HDPE and Low Carbon Stainless Steel are already for many years proven materials for optimum Water Control.

ROwat Water Control product portfolio contains:

- Flap Valves
- Inline Check Valves
- Penstocks
- Irrigation gates
- Sluice gates
- Channel Penstocks
- Overflow Weir Gates

thewateragency.com

The Water Agency is a social enterprise that aims to increase the positive impact of international water projects in Asia through local stakeholder and community engagement, youth leadership and water education.

Through our 'Water Hubs' in Indonesia, Vietnam and Myanmar, we support our partners and clients to align interests, expectations and ambitions between international and local experts across government, private sector, communities and academia – ensuring strong local ownership in every project.

In Vietnam, TWA leads several projects:

- Development of a Serious Game for Soc Trang and Ben Tre provinces to promote dialogue between government and water users (farmers, industry, water companies) to reduce groundwater extractions. Partners include Deltares, CTU, HUNRE, ICED and WUR. Funded by Partners for Water.
- The UNESCO Water Resilience Challenge, a competition that invites innovative solutions to address water problems in UNESCO sites across SE Asia. Funded by UNESCO.
- Two-year innovation project in Tra Vinh province to experiment the potential of tools and approaches supporting farmers with salinity. Partners include TVU, Kim Delta, Salt Doctors, Skilled, Saxion University, HZ University and Acacia Water. Co-funded by Partners for Water.
- The Vietnam AquaVenture (VAV) water innovation competition for young water entrepreneurs. Co-funded by RVO/Netherlands Embassy.

World Water Academy

World Water Academy, renowned as the leading independent training institute for water professionals, provides globally recognized interactive and practical courses. Operating as “[Wateropleidingen](http://waterpleidingen.nl)” in the Netherlands, we advocate for the acquisition and dissemination of essential water knowledge and skills to foster a sustainable water sector worldwide.

Our recent initiatives include the OKP “WATRA” project in Jordan, where collaboration with partners IHE Delft and Al-Balqa’ Applied University resulted in sustainable solutions for water sector challenges. Engaging 84 professionals, our multiple-level education approach addressed the needs of drinking water and wastewater sectors.

In the OKP “Bridging the Water” project, we collaborated with TU Delft, Hogeschool Rotterdam, University of Cape Town, and Durban University of Technology. Facilitating knowledge exchange and collaboration, our action-learning and practical training involved over 600 professionals, bridging theory and practice for improved water management and enhanced services in South African municipalities.

World Water Academy remains committed to advancing global water expertise and contributing to a more sustainable future.

The Confederation of Dutch Industry and Employers, known as VNO-NCW, is the largest employers' organisation in the Netherlands. It has 150 branch organisations and more than 400 individual enterprises as affiliate members, representing a total of over 120,000 companies.

It covers practically all sectors of the Dutch economy: industry, commercial services, construction, the retail trade and the health sector; from the smallest firms to the largest corporates. It represents 80% of companies with more than ten employees and 95% of companies with over 100 employees and all companies in the Netherlands employing more than 500 staff.

In cooperation with governments and other social parties, VNO-NCW strives for an inclusive and sustainable Netherlands, where everyone benefits from increasing prosperity. This requires sustainable economic growth and a high quality business and investment environment.

VNO-NCW represents the interests of its members by active ongoing contacts with the government, politicians, public authorities, trade unions and non-governmental bodies. VNO-NCW sits on numerous government advisory and consultative committees in The Netherlands, in Brussels and in international bodies as the International Labour Organisation and, through the BIAC, in the OECD.
