Development in the number of new registrations (sales) of electric passenger cars⁵

BEV passenger cars with the largest increase and decrease in July 2020⁶

The total increase of BEV passenger cars was 4,372. The cars mentioned in the graph represent 55% (2,424) of the total increase.

The total decrease (export, theft, destruction) of BEV passenger cars was 114. The cars mentioned in the graph represent 74% (84) of the total decrease.

⁴ Source: all Passenger Cars: Dutch Road Authority (RDW) and RDC (Bovag/RAI, www.bovag.nl). This table shows the number of new registrations. Trade stock included, occasion import excluded. These numbers are not on balance / not corrected for elimination by theft, export, etc. The percentages have been rounded off to the first decimal place.

⁵ Source: Dutch Road Authority (RDW), edited by Netherlands Enterprise Agency (RVO.nl). New import: cars that ≤ 90 days old at 1st registration in The Netherlands. These cars are considered as new. Occasion imports (> 90 days old) are excluded.

⁶ Source: Dutch Road Authority (RDW), edited by Netherlands Enterprise Agency (RVO.nl). Total increase consists of sales of brand new cars, new import (≤ 90 days old) and occasion import (> 90 days old). Decrease consists of export (97 - 99%), theft (0.8 - 2.4%), destruction, etc.

PHEV passenger cars with the largest increase and decrease in July 2020⁶

The total increase of PHEV passenger cars was 2,120. The cars mentioned in the graph represent 42% (893) of the total increase.

The total decrease (export, theft, destruction) of PHEV passenger cars was 560. The cars mentioned in the graph represent 69% (387) of the total decrease.

Dutch ambition and realization

Ambition						
2020	10% of all new passenger cars sold will have an electric powertrain and a plug. ⁷					
2025	50% of all new passenger cars sold will have an electric powertrain and a plug, and at least 30% of these vehicles (15% of the total) will be fully electric. ⁷					
2030	100% of all new passenger cars sold will be zero-emission. ⁸

¹² Data from <https://www.crow.nl/dashboard-autodelen/home>, the numbers are updated once a year.

¹³ Based on data by stichting e-laad, EV-Box B.V., NUON and Essent, The New Motion (data up to 31-10-2012) and Eco-movement (starting with data as of 30-11-2012). Up to 28-02-2014 the assumption is made that charging points from e-laad, Nuon and Essent are public and the others semi-public. As of 31-03-2014 Eco-movement states whether charging points are public or semi-public.

¹⁴ Semi-public charging points are interoperable and have been reported as accessible by their owners. These charging points can for example be found in shopping malls, office buildings, parking garages and at private persons who have made their charging point accessible to others.

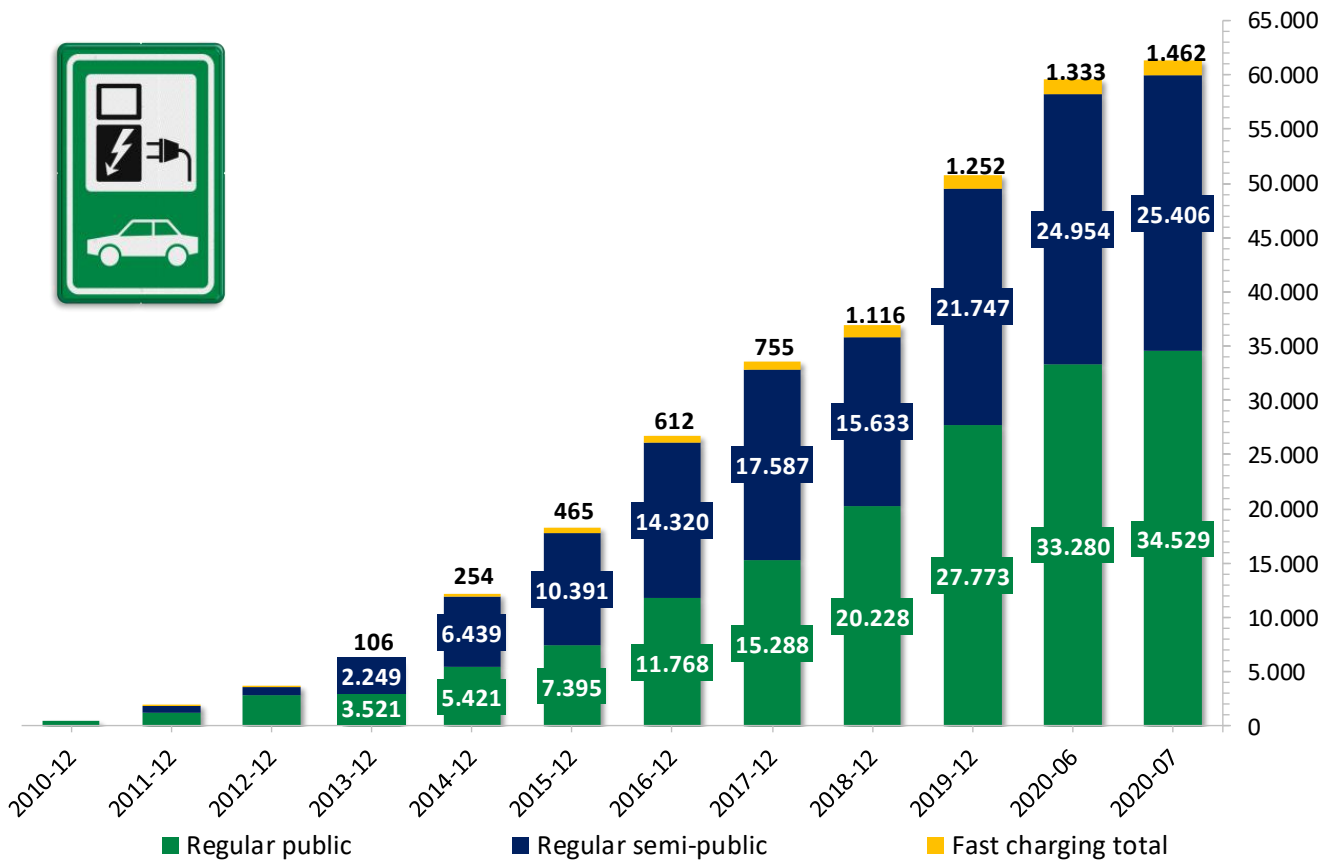

¹⁵ An EVSE (Electric Vehicle Supply Equipment = charging point) may have several connectors in order to accommodate different connector types, but only one can be used at the same time. Due to improvements in the data on fast chargers, from July 2019 onwards we report the number of EVSEs instead of connectors (regular charging points have always been counted in terms of EVSE). Based on data from Aug. 2019, the number of fast charging connectors is approx. 25% more than the number of fast charging EVSEs. For example: fast charging stations with 2 EVSEs and 3 connectors: not more than 2 connectors can be simultaneously used to charge electric cars).

¹⁶ Fast charging location = geographical location consisting of one or more chargers with an electric power of > 22kW.

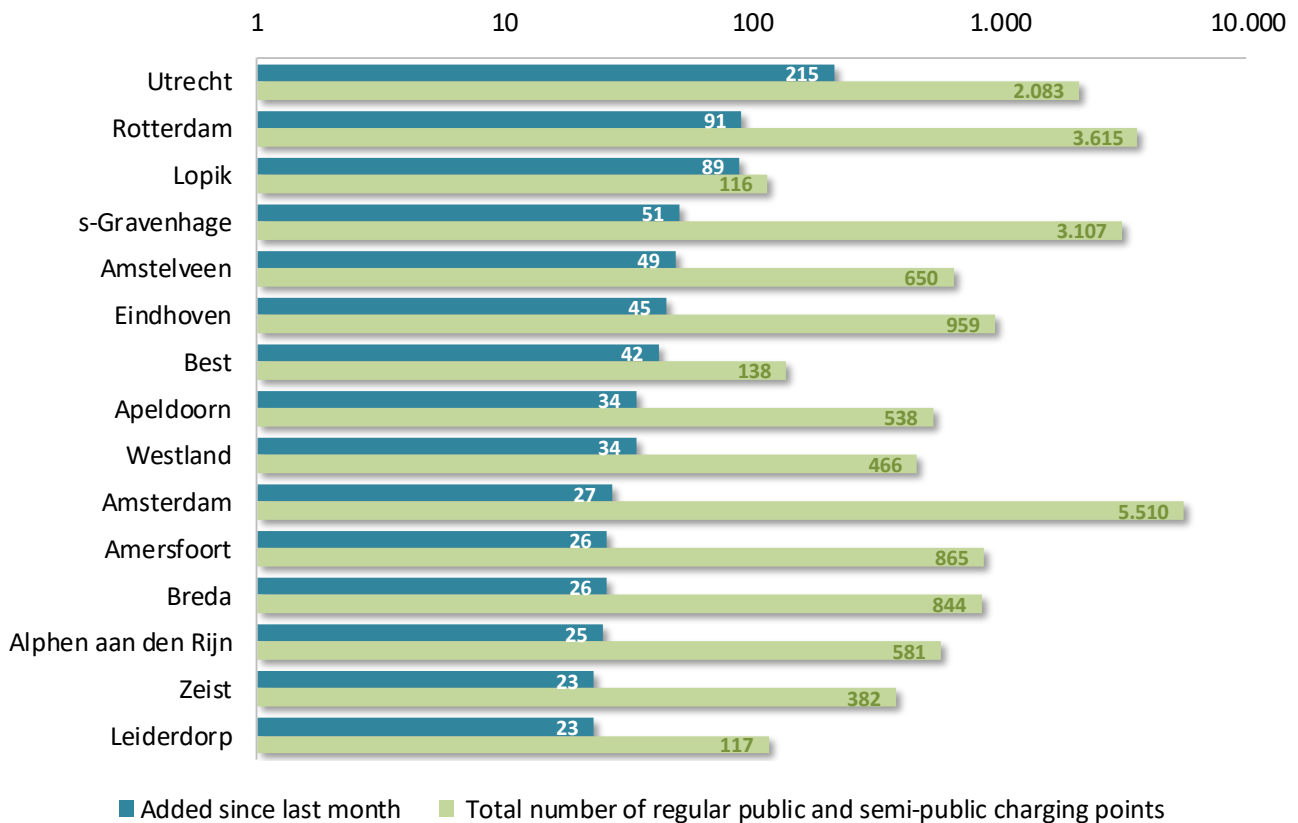

¹⁷ Estimation based on research in 2020; 58% of EV owners have a private charger according to the [Nationaal Laadonderzoek](#).

Hydrogen refuelling stations

The Netherlands has 3 public accessible hydrogen refuelling locations:

- Rhoon (nearby Rotterdam, 350 bar and 700 bar);
- Helmond (in the south, 350 bar and 700 bar);
- Arnhem (in the east, 350 bar).

Delfzijl hosts a hydrogen refuelling station to service fuel cell electric public transport buses.
