Hineleban Foundation engages with communities located near critical bufferzone and watershed areas to form partnerships that are committed to community empowerment and reforestation.

In the R2CR2T Project (WP2), Hineleban Foundation is applying its rainforestation approach, through support from the Sustainable Water Fund (FDW), a programme from the Netherlands Enterprise Agency on behalf of the Ministry of Foreign Affairs, to critical sites in Lirongan, Talakag for the protection of the sub-watershed area. This is to mitigate the risk of flooding, water scarcity, and various other adverse impacts to agriculture caused by the state of deforestation and degradation in the Mt. Kitanglad Range.

Hineleban Goals for the Project:
1. Engage and train 50 Indigenous Peoples (IP) farmer families in agroforestry for food security farms
2. Train the same 50 families in the production of high value crops (i.e. Adlai and Arabica coffee)
3. Reforestation of the bufferzone and riparian areas of Lirongan, Talakag with the same 50 families
